

Cozy Corner Stores

Sales Performance Dashboard Project Documentation

1- Project overview

This project is about online retail business operating across multiple international markets and selling products

The company sells category:

- Furniture
- Office Supplies
- Technology

The goal of this project:

- Track orders
- Track financial
- Product Detail
- Track Shipping

The dashboard helps stakeholders to make better decisions & comparing trend between the current status and last year's status.

2- Dataset

We have one table , it contains all transactions and no need to make data modeling or relation with another tables

-This table shows what happened related all transaction

 **-This table shows what we sell**
(Segment , Category , sub category , Price , Cost , shipping cost , Discount)

 **-This table show when the sales happened from 2011 till 2014 Orders & Shipping**
(Years , Month , Day)

 **- This table show location.**
(State , Country, Market , Region)

3- Data Preparation

General data cleaning:

we clean the data before using it

Steps :

- We have issue on {order date & shipping date} so using (split column) to spilt (Day , Month , Year) and rearrange Date using (Merge columns) and change to date type .

- Remove duplicates

- Remove empty rows

- Handle errors

This make data clean and stable & use the date to analysis the trend .

4- Data Modeling

We have one table no need to make relation with other tables

5- Calculation (DAX)

Divide to 2 Parts:

A. Orders : Track number of orders

KPI : Total orders to show many of orders ,

- Use (DAX DISTINCTCOUNT to avoid any multiple rows with the same order ID)

B. Financial : understanded revenue , cost , AOV, YOY% and profit KPI :

- **Revenue:** this shows total revenue,

- **Total Cost :** this show total cost ,(after deduct shipping cost)

- **Net profit :** this show real profit , (revenue – cost)

- **Margin profit :** this show profit percentage

- **YOY% (year over year %) :** this show comparing revenue by years

- **AOV :** this show measurement the average order value (Divide revenue ,total order)

- **Total ship. Cost:** this show the shipping cost

6- Dashboard layout:

Goal : make dashboard clear and easy to use

The dashboard divided into **4 pages**:

(Orders – Financial – Product – Shipping)

Each page focuses on one business area.

General flow

User reads each page like this:

- **KPI** (What happened?)
- **Trend** (How it changed over the time?), **specific (Orders – Financial)**
- **Driver** (Why it happened?)

First page (orders): This page track the orders and define trend over the time.

- country → (location impact)
- Segment, customer name → (Performance level)
- Trend Orders over the time → (Define the Trend per year)

Second Page (Financial): This page track the financial Impact

- Country, Market → (location impact)
- Category, sub category → (Product demand)
- Trend Revenue over the time → (Define the Trend per year)
- YOY% by revenue → (Comparing revenue per year)

Third Page (Product): This page track the product transactions

This page divided on one template research by (Category, sub category, Product name) includes all transactions EX (revenue, cost, profit, YOY%,...)

Fourth page (Shipping): This page track the shipping status

- Shipping mode → (check ship status by orders & revenue)
- Country → (location impact)

7- Interactions:

- **Create Navigator includes:**

(Home - Orders – Financial – Product – Shipping)

To navigate between pages easily.

- **Slicers :**

➤ Orders:

(Market , Region , Country) → This slicers show filter orders by location

➤ Financial:

(Market , Region , Country) → This slicers show filter all financial transactions by location

➤ Shipping:

(Market , Region , Country) → This slicers show filter Shipping cost by location

➤ Product:

(Market , Region , Country) → This slicers show filter Product by location

(Shipment mode) → This slicer shows filter product by type of shipping

(Customer segment) → This slicer shows filter product by customer segmentation, Sample {consumer, corporate}

(Order priority) → This slicer shows filter product by order priority

- **Tooltip:**

Add tooltip to appear important data on more charts.

8- Conclusion:

Goals: Business monitor & make right decision by our analysis

This dashboard helps managers to:

- Monitor orders & sales from 2011 till 2014
- Track profit and performance
- Compare by trend over the time
- Identify problem quickly
- Take fast decision: EX. increase or decrease products related our analysis
